

End Goal: One Complete Theory Paper

By 2 hours: a paper that reads as finished

The sprint

- Start from a seed theory idea
- Split construction of style guides across teams
- Use models to draft complete versions
- Verify and rewrite against the guides

The deliverable

- Title, abstract, introduction
- Related literature
- Model
- Main result, complete proof
- Worked example

Teams

Six teams, each owning one segment or paper-wide standard.

Model	assesses and improves the seed model, by hand
Intro	motivation and framing
Literature	closest papers
Main Results	theorems and full proofs
Example/Simulation	a toy environment that exposes the mechanism
Paper Format	full-paper structure, style, and final formatting

Timeline

Four half-hour phases.

- 0–30** **Style guides.** Each team drafts its guide, except for the Model team who improves the model by hand (more later).
- 30–60** **Candidate results.** All teams generate candidate main results and interesting forces.
- 60–90** **Models write.** Everything goes into Fable 5 and GPT 5.5, which output complete papers.
- 90–120** **Verify.** Each team audits and rewrites its own segment.

Style Guides

1-2 pages

Contents

1. Goal of the segment
2. What good looks like
3. Common LLM failure modes
4. One strong example, maybe a weak example

Use

- The models write against the guides
- Standards set early

The guide is the contract between economists and the models.

Seed Model

Setup

- Productive direction is $(0, 1)$
- A human moves in that direction at fixed speed
- An AI moves much faster but in a random direction perturbed relative to $(0, 1)$ (and thus possibly counterproductive)
- Pay cost c to check the direction and re-calibrate

Question

- Expected payoff relative to human search?
- What human speed is the AI equivalent to?

The AI has drafted a model based on this description.

Shared Dropbox Folder

Use the shared folder as the source of truth.

- We have a shared Dropbox folder.
- Each team should only modify its own subfolder.
- Email me to gain access.
